

Dear Students and Families,

It is really important that you continue to learn and strengthen your math skills over the summer! It will help prepare you for the school year and help ensure you do not forget anything you learned this year. Research shows that students can lose up to 2.6 months of math learning during the summer months. Research also shows that just 2 hours of work each week in math can help prevent this summer learning loss. It is incredibly important that you complete your summer math work.

This summer, **your job will be to complete the Khan Academy “Getting Ready for 6th Grade” lessons.** The link for these lessons is on your Google Homebase and you can also find it by logging into [khanacademy.org](https://www.khanacademy.org). DO NOT TRY TO DO THIS WORK IN ONE DAY! Spread it out over the whole summer. Below is our suggested timeline for you.

Topic	Complete By
Get Ready for Ratios, Rates, and Percentages	7/2
Get Ready for Arithmetic Operations	7/16
Get Ready for Negative Numbers	7/30
Get Ready for Expressions, Equations, and Inequalities	8/13
Get Ready for Geometry	8/27

Make sure you complete all the videos, questions and quizzes to get full credit. You must earn a score of 80% in order for the assignment to count. This work can be counted as your first grade of Trimester 1 next year. Completion of all assignments are due at the starting strong conferences.

If you have any questions about your work, first check google classroom. If you still have questions, reach out to Ms. Green at d.green@wissahickoncharter.org. Have a great summer!
